Seal Methods Inc. Expands to Texas to Support EV Market

For Immediate Release

Santa Fe Springs, CA (December 22, 2021) – The Seal Methods Inc. board has approved a strategic expansion into Austin, Texas to support leading electric vehicle (EV) automakers. With construction delays due to COVID, we will be opening early 2022.

"SMI is committed to supporting our customers in the best way possible. We know supply chain proximity and ease of working relationships are key in this economy. Our expansion to Austin, TX allows us to continue facilitating the needs of our EV partnerships at the highest level", noted Darin Welter, President Seal Methods Inc.

"This announcement is an indication of our commitment to supporting our clients," continued Darin, "and is one of many exciting announcements SMI has planned for 2021".

About Seal Methods Inc.

Family run since 1974, Seal Methods Inc. has grown into one of the most diversified materials converters in the country. As a leading custom converter, manufacturing rotary and flat stamp die cuts, multi-laminations, water-jet, and laser cut materials.

Seal Methods Inc. is best known for their gaskets, seals, tapes, and precision die cuts, using materials ranging from sponge or rubber to high-performance elastomers, foams, foils, films, plastics and pressure sensitive adhesives. They work closely with their clients to prototype and manufacture custom applications, whether for a simple cushion or adhesive tape, or high-performance lamination, custom insulators/shielding or thermal management.
