SEAL METHODS INC.

GASKETS, SEALS, TAPES & PRECISION DIE CUTS
ISO & TS-16949 REGISTERED COMPANY

SINCE 1974

Custom Components:

The Building Blocks of the Glass & Construction Industries

At Seal Methods, Inc., we provide builders with products designed to protect, seal, insulate, and reduce sound and thermal transmission. Our broad line of compressible foam and adhesive tapes, glazing tapes, gaskets, and extruded foam profiles are available in a wide range of densities, thicknesses, and adhesive formulations. These materials are ideal sealing solutions for hundreds of construction applications – from glass & windows, sill systems, exterior wall systems, and metal walls & roof panels to acoustical systems, roofing, and more.

Key Products

Shipping pads
Button Pads
Spacer pads
Surface protection
Protective films
Single-sided tapes
Glazing Tapes
Double-sided tapes
Bonding tape
Rubber gaskets
Gaskets
Liquid adhesive & sealants

CONSTRUCTION INDUSTRY 2016

Custom designed SHAPES

CONSTRUCTION COMPONENTS

Applied between wood or metal framing members and subflooring, exterior sheathing, or interior gypsum board, Norton CST® Construction Gaskets utilize a patented technology to reduce sound and thermal transmission. When used on floors, walls, and ceilings, they give the room a quiet ambiance – they are proven to reduce noise transmission by up to 90%! We offer solid and foam core butyl mastic tapes in a variety of shapes and dimensions to meet the needs of commercial or residential projects.

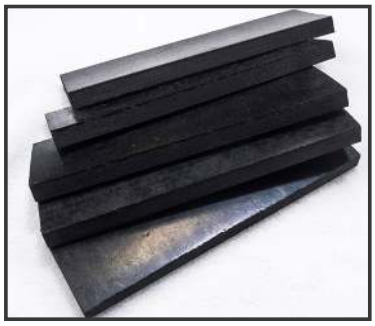
Low density closed cellular Sill-Seal material is designed to seal between the sill plate and masonry or reinforced concrete. By reducing air infiltration, it provides a tighter building envelope and promotes energy savings. This product has excellent resistance to weathering, fungi, and oxidation and is available with an optional pressure sensitive adhesive to speed installation.

WINDOW COMPONENTS

SMI provides virtually any type of pressure-sensitive tape for temporary or permanent component attachment. We offer a full line of AAMA-approved glazing tapes for applications such as interior glazing, residential and commercial windows, two- and four-sided structurally glazed curtain walls, and skylight systems. Cellular glazing tapes provide superior long-term sealing, thermal resistance, sound dampening and aesthetics when compared to solid and gunnable materials. Economical options are available for both residential and commercial applications. To facilitate bonding glass and other exterior wall panels to the framing system, we offer Thermalbond® structural spacer tapes. We also offer polycarbonate- and Plexiglas-compatible sealants and adhesives.

GLASS MANUFACTURING PRODUCTS

SMI offers protective shipping and spacer pad materials for glass manufacturers specializing in flat, bent, tempered, insulated, and mirrored glass. Custom laminated using cork, vinyl, re-bonded rubber, felt, and various grades of foams, these materials are available with a permanent or repositionable adhesive or a static foam/film. We custom manufacture products to the exact thicknesses, width, and length dimensions you require. We also offer a full line of protective films, masking products, and setting blocks in any dimensions.



SMI: Your source for seals, tapes, die cuts and custom components for the Construction Industry.
