For over 45 years Seal Methods has worked closely with internationally recognized OEM’s & After Market Manufacturers to develop custom solutions for Molded and Extruded products.

We will work with you to identify the optimal raw materials and the processes for each application and help develop products for your custom designed part. Through these collaborations, integrated with our expertise in engineering, material specifications, prototyping and manufacturing, we produce the highest quality products available in a wide variety of industries.

At SMI, we listen to your needs, and deliver customized product solutions that help drive your success.
Our products are all around you. We manufacture components for the OEM automotive industry, high-performance aftermarket, aerospace, electronics, energy, industrial, transportation, medical and countless others. SMI’s long history of engineering, prototyping, and manufacturing precision molded and extruded products allows us to identify the optimal materials and processes for each component. We offer a variety of materials, methods, and finishing including:

**Design & Engineering Assistance**
- Quick-Turn Prototyping
- Design for Manufacturability
- Cost Optimization

**Molding Methods**
- Liquid Injection Molding
- Compression Molding
- Ram Injection Molding

**Finishing**
- Apply PSA / Adhesives
- Apply pull tabs
- Extrusions cut to length
- Labeling
- Assembly
- Packaging
- Kitting

**Extrusions Sponge or Solid Rubber**
- Silicone
- Epdm
- Neoprene
- TPR
- Custom Formulations
- Buna
- Viton
- Rubber with metal insert
- PVC

**Rubber**
- Silicone
- Epdm
- Neoprene
- TPR
- Buna
- Viton
- Flourosilicone
- Flouroelastomers
- Dupont-Kalrez
- Over Molding with metal inserts

**Various Molded Plastics**

SMI is here to deliver the highest quality products. Connect with us today and let us demonstrate how we can fulfill your current needs and begin a long-term partnership.

Serving Customers World-wide.
